

Special Advisory for the Kalamazoo River

As of May 2011, the Michigan Department of Community Health's **"do not eat" advisory for all fish caught in Talmadge Creek or the Kalamazoo River to the west end of Morrow Lake** continues. Fish are being tested for chemicals. MDCH will update the advisory as more information is gathered.

Please check with your local health department regarding the current status of the ban on surface water activities in your area. These bans have previously included all swimming, wading, fishing, boating, canoeing and kayaking.
